

**Press release****SUMMIT SERIES – Trailer mounted booms**

Haulotte Group enriched its range, counting more than 60 models, with trailer mounted booms, the Summit Series® from Bil-Jax, Inc.

Towable booms have many advantages, more versatility, easier to transport and offer the most reach for the least cost. They are perfect for building construction and repair; tree trimming; sign installation and repair; painting tall buildings and structures; and installing holiday lights and decorations.

Bil-Jax first introduced the 3632T into the Summit Series, a telescopic boom offering 13.4 m (43 ft., 6 in.) of maximum working height. This lift was followed by three more models of articulating booms – the 3522A (11.3m – 37 ft. 2in.), 4527A (13.7m – 45 ft. 0 in.) and the 5533A (16.8m – 55 ft. 3 in.). The most recent addition to the Summit Series is the 2622T, a telescopic boom lift with 8.10 m (32 ft. 6 in.) of working height.

All units feature an automatic, self-levelling hydraulic outrigger system that allows for set-up in 30 seconds when all four outriggers are deployed simultaneously. The extra-large, non-marking outrigger footpads make these units ideal for indoor and outdoor applications. The controls on the ground and on the platform have the same, simple-to-understand layout and push button design, so there is little operator learning curve – making them excellent for one-time customers or contractors who have multiple employees.

The Summit Series towable booms can be transported by any standard half-ton pick-up truck.

All Summit Series models have a 227 kg (500-lbs.) platform load capacity and large 2-person platform. Other standard features include: hydraulic surge brakes; forklift pockets; outrigger interlocks; and an outlet at the platform. Many options are available including a combination DC and gas hybrid, material lift attachment, drive and set feature, and available on specific models: a retractable axle feature and jib rotate.

Offering maximum safety, the **SUMMIT SERIES** complies with the latest labour regulations, to European (CE) and also international standards (ANSI, CSA).

The HAULOTTE Group recently acquired Bil-Jax which also produces frame, system and utility scaffolds, self-propelled booms, telescopic lifts, material lifts, equipment trailers, drywall equipment, event staging and seating.
