X-BOOMS: Self propelled booms

Haulotte Group enriched its range, counting more than 60 models, with the X-Booms, self-propelled booms from Bil-Jax.

X-Booms match industry standards with 45% gradeability, 5.6 km/h (3.5m mph) drive speed and four-wheel drive capability. Hydraulic outriggers have replaced the heavy counterweights found on conventional self-propelled machines. Set-up is complete in less than 30 seconds. This makes the X-Boom lighter and less expensive than other self-propelled booms on the market.

Two models are currently available. The 36XT is a Telescopic Boom featuring 13.4 m (43 ft. 6 in.) of working height and a 9.8 m (32 ft. 0 in.) maximum outreach. Weighing in at 2,277 kg (5,020 lb), operators can transport the 36XT on a trailer with a medium duty SUV or truck. The 45XA is an Articulating Boom with a 15.6 m (51 ft 0in.) working height and 8.2m (27 ft. 0 in.) of maximum outreach. The weight of the 45XA is less than 2,139 kg (4,715 lb). Both X-Booms require no commercial driver's license for towing. There are a variety of options available for these lifts.

Offering maximum safety, the **X-BOOMS** complies with the latest labour regulations, to European (CE) and also international standards (ANSI, CSA).

The HAULOTTE Group recently acquired Bil-Jax which also produces frame, system and utility scaffolds, trailer-mounted boom lifts, telescopic lifts, material lifts, equipment trailers, drywall equipment, event staging and seating.
